Admission process: Documents verification

Ward allocation subject to bed availability

Ward

- Admission to allocated bed
- Height, weight & vital signs are taken
- Ward orientation provided to patient and caregiver
- Sign procedure consent.
- Medical examination:
 - Blood test
 - ECG/ECHO

Patient preparation

- Intravenous insertion
- Skin preparation: Iodine & plaster test
- Fast 4-6 hours before procedure
- Take pre-medication if required

Post procedure/Post procedure in ICU/ward

- Vital signs and puncture site (wrist/groin or femoral) are monitored closely
 - Plaster is applied to prevent bleeding
 - Rest in bed for 6 hours (if groin approach)
 - Patient is allowed to eat once he/she returns to the ward
- Undergo ECG if required
- Doctor inspects puncture site and dressing is changed to small plaster
